Introducing a Brief Guideline for CDC Speakers

Our prime conference CDC has grown considerably in the past thirty years or so. Indeed, the total number of pages of the proceedings has grown almost 4 times as much compared to 1982, and it will grow even more. The allotted time slot has become shorter compared to that time, there are no printed proceedings available at the site, as a result. The speakers are hence expected to give a very clear talk in the limited time they have. It is no longer true that we have plenty of time to give every detail of our scientific discoveries.

The Executive Committee of the Control Systems Society would like to invite the authors to re-evaluate the organization and method of delivery of their presentations with the prime objective of benefiting their audience. Particularly, we would hope that academic supervisors provide suitable advice to their students to give clear and easily accessible presentations so that they can deliver their message more effectively.

We have prepared a very short one-page guideline for CDC presenters. We would very much hope that the speakers look at this guideline at

http://www.ieeecss.org/sites/ieeecss.org/files/CDCGuidelineforSpeakers.pdf
or
CSS top page
http://www.ieeecss.org/ -> Announcement -> A Guideline for speakers
http://www.ieeecss.org/conferences/guideline-speakers

and can reach the audience in an effective way.

Best wishes,

Yutaka Yamamoto
President-Elect of the Control Systems Society
Chair, Long Range Planning Committee
